HOVER

HOW TO USE

HOVER's .esx file

Exporting .esx file

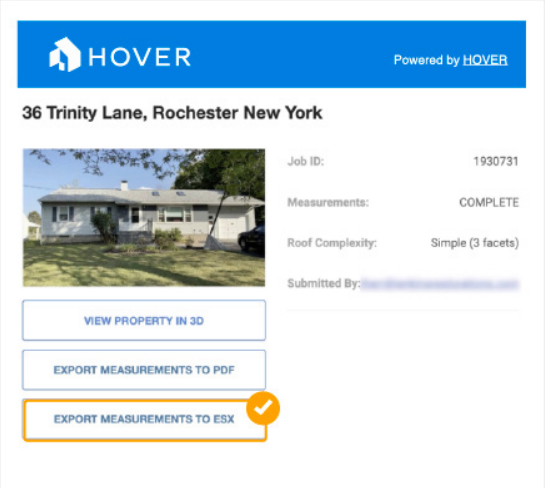

There are two simple ways to download the .esx file. Download it from your email or from the HOVER web app.

OPTION 1: Download from "Property Complete" email

1. Open HOVER's "**property complete**" email with all deliverables.

2. Click on the "**Export measurements to .esx**" link to download and save the .esx file.

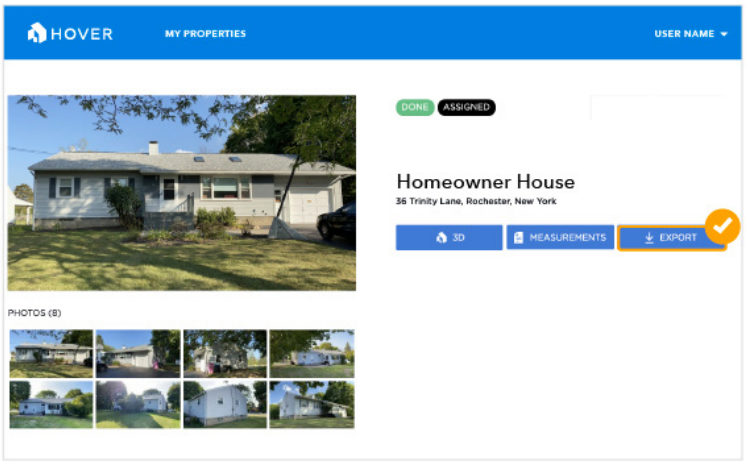

Note: If prompted to open the .esx file automatically after downloading it, do not download the file, save it instead.

OPTION 2: Download from the HOVER web app

1. Log into **hover.to** (on Chrome or Edge on PC, Chrome or Safari on Mac) and open the property.

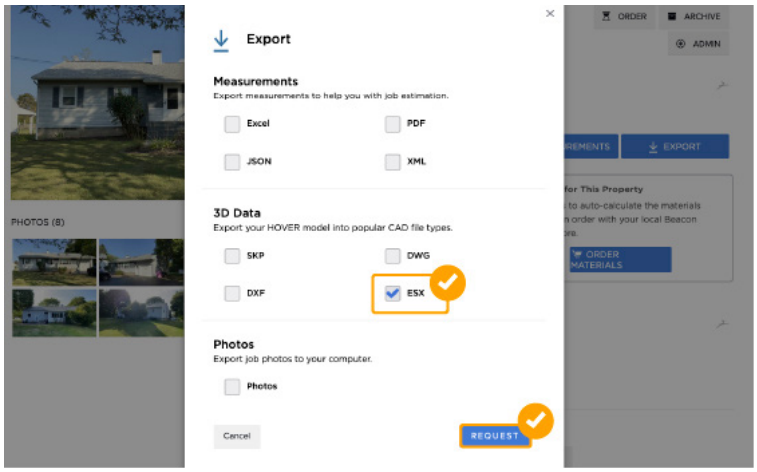

2. Click on the "**export**" button underneath the property address.

3 Check the "**.esx**" box in the 3D Data section and click on "**request.**"

4 You will receive an email with the .esx file at the address that you use to log into HOVER.

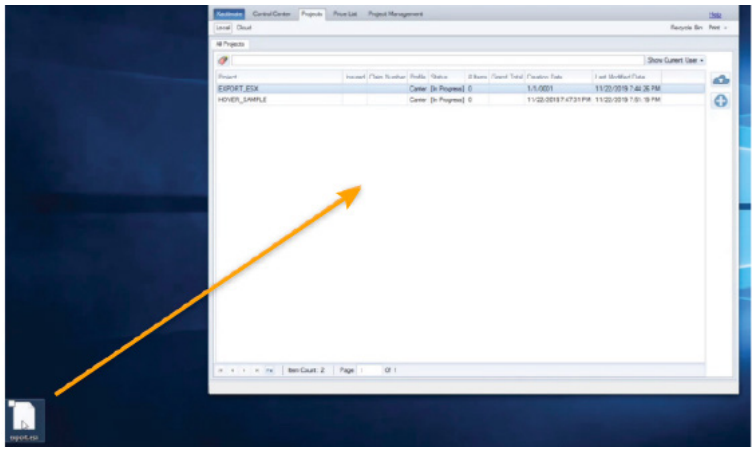

Note: If prompted to open the .esx file automatically after downloading it, do not download the file, save it instead.

Importing .esx file

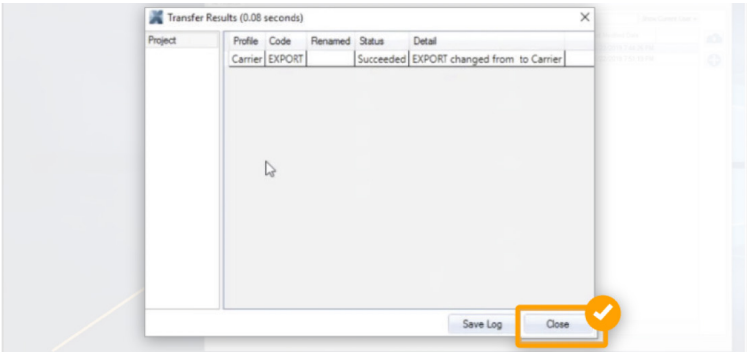

There are many ways you can import an .esx file into Xactimate but this is the most reliable option.

1 Drag the file to your Xactimate "**Projects**" folder.

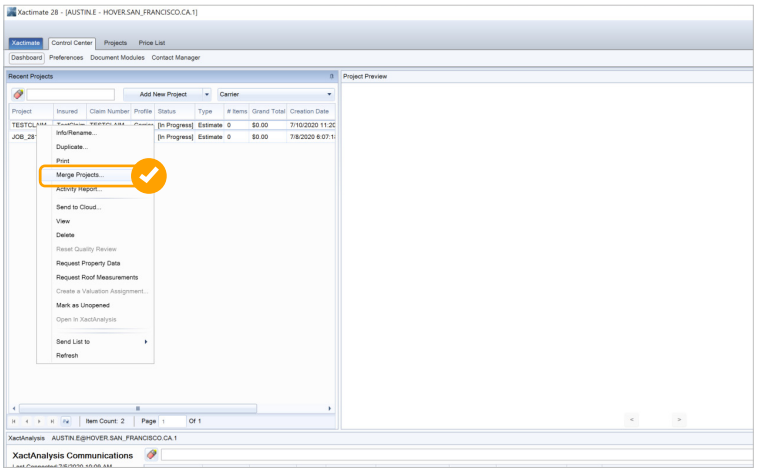

2 Tap on "**close**" in the Transfer Results dialogue.

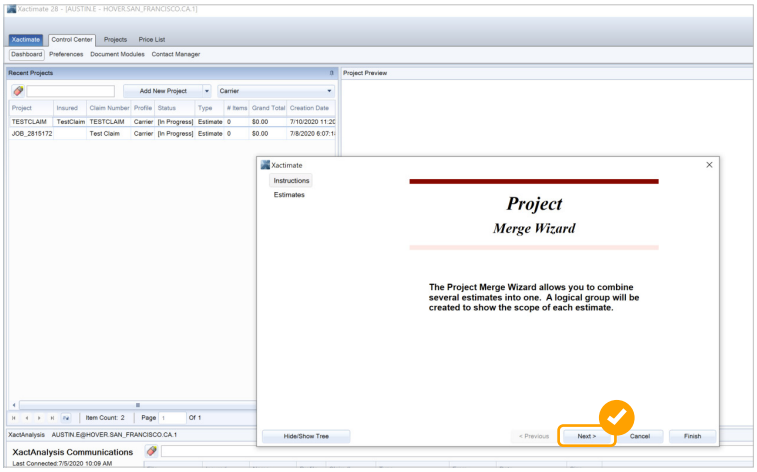

Note: If you don't see the Transfer Results dialogue, it may be hidden behind other screens or only partially visible on your screen.

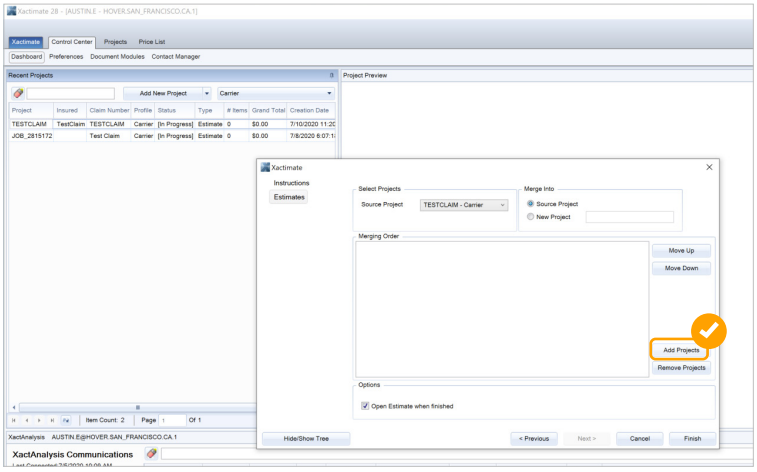

3 Right-click on your source file and tap "**Merge Projects**."

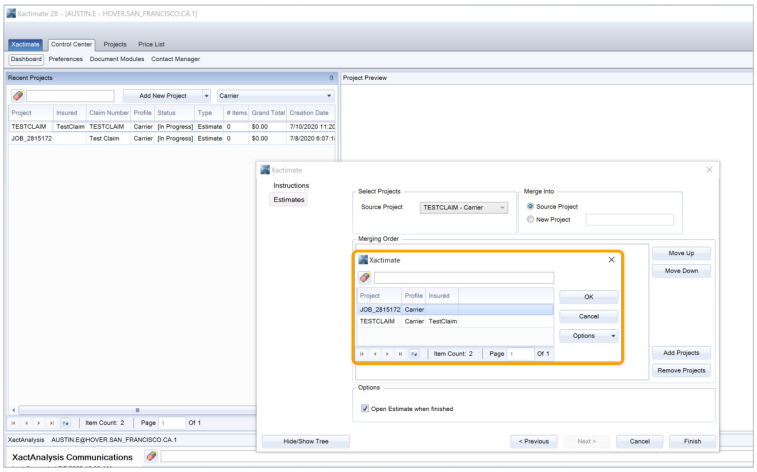

4 Tap on "**next**."

5 Tap on "**Add Projects**."

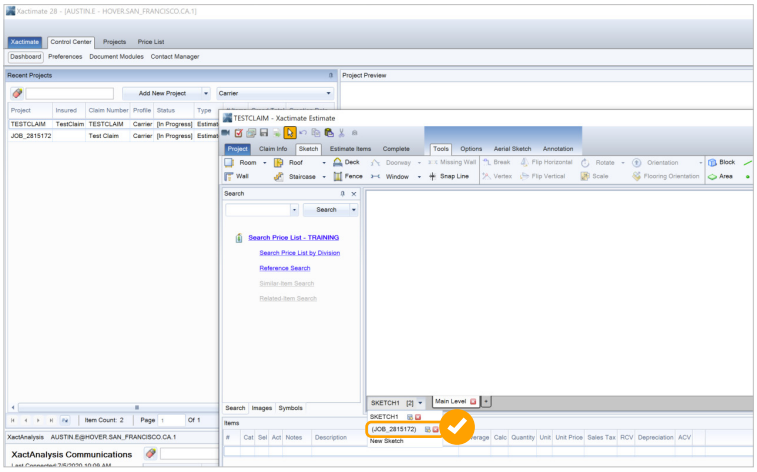

6 Select the project from which you'd like to copy the content.

7 Open the sketch tab in the source file.

Note: If you see more than one sketch, make sure to select the one that contains the merged content.

8 Create your estimate.
